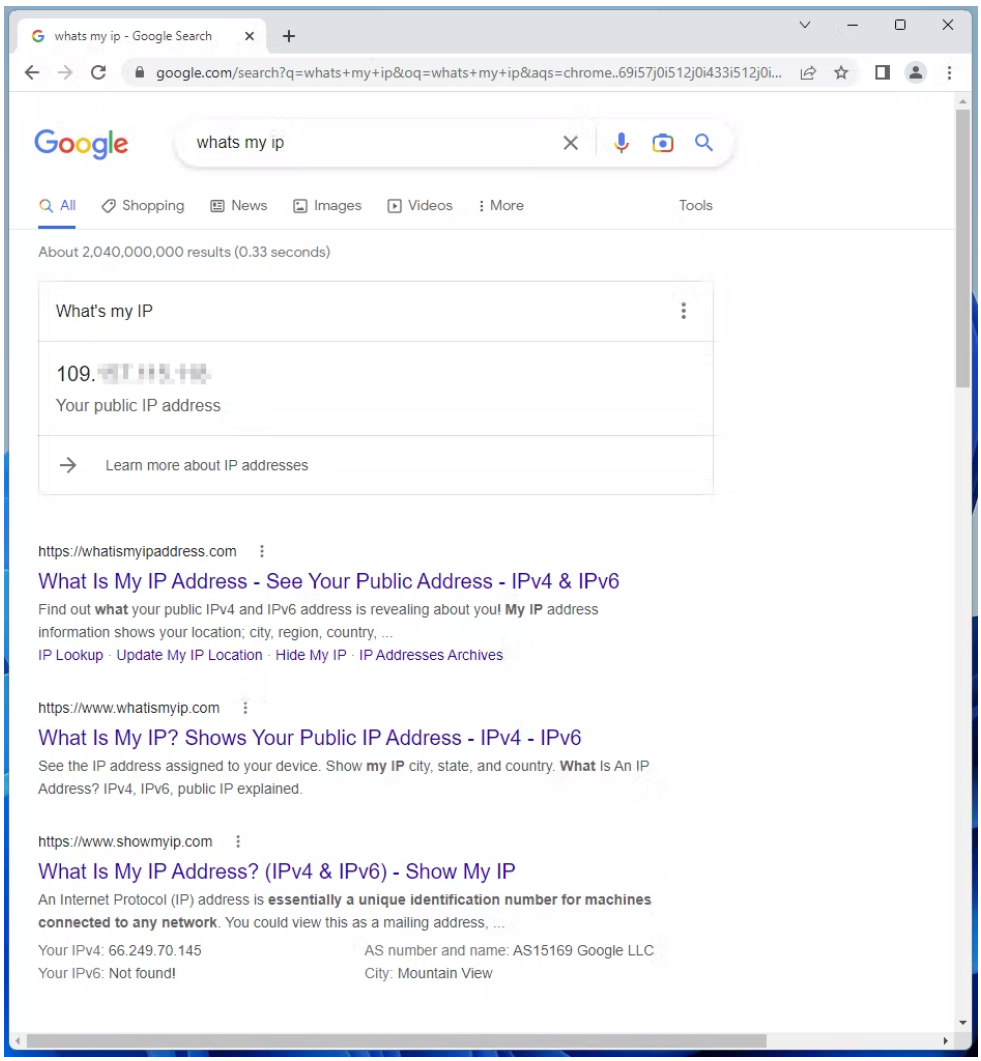
Edit More

Steps

Before starting check your IP as you access the internet with Chrome by googling `whats my ip`



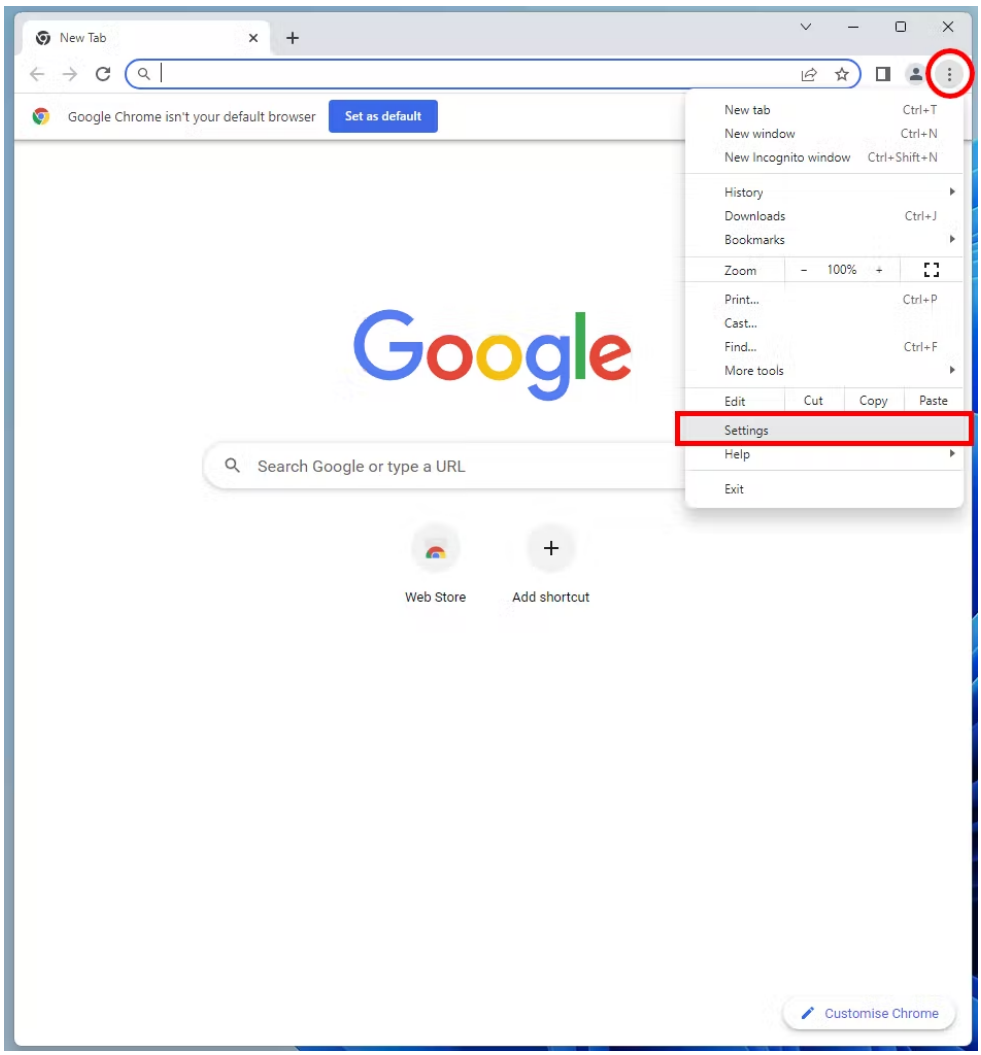
Step 1

You must setup the local `socks5` proxy before continue. It can be done with:

- PuTTY
- OpenSSH

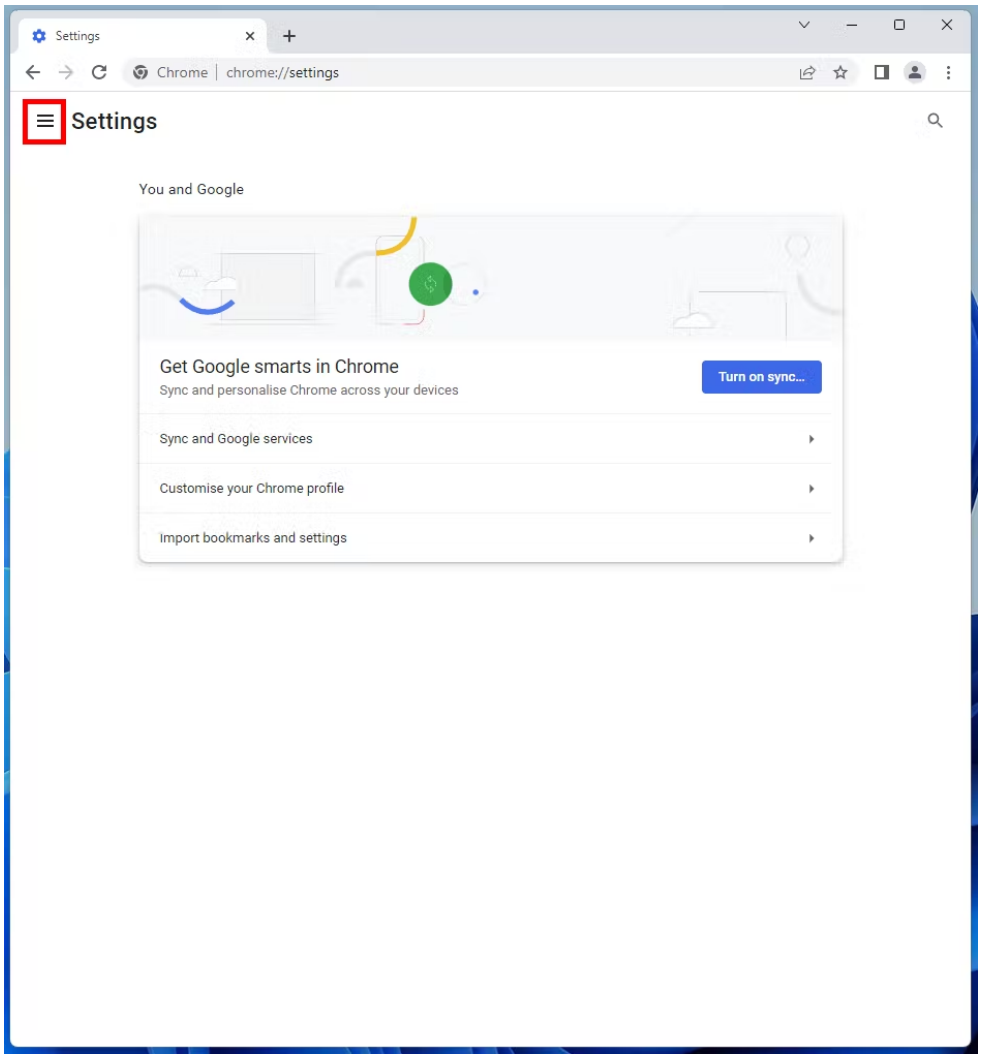
Step 2

Open Google and head to the settings section.



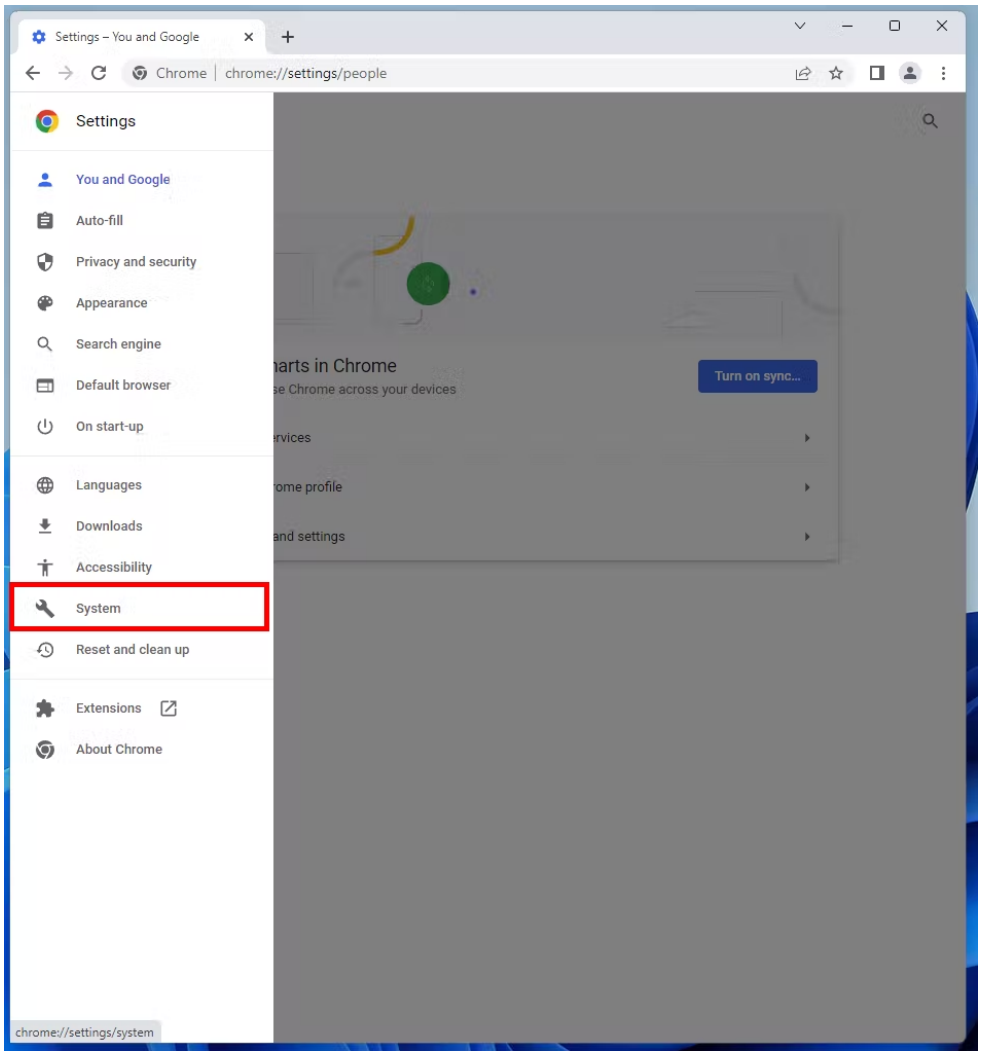
Step 3

Now click in the top left corner to open more settings



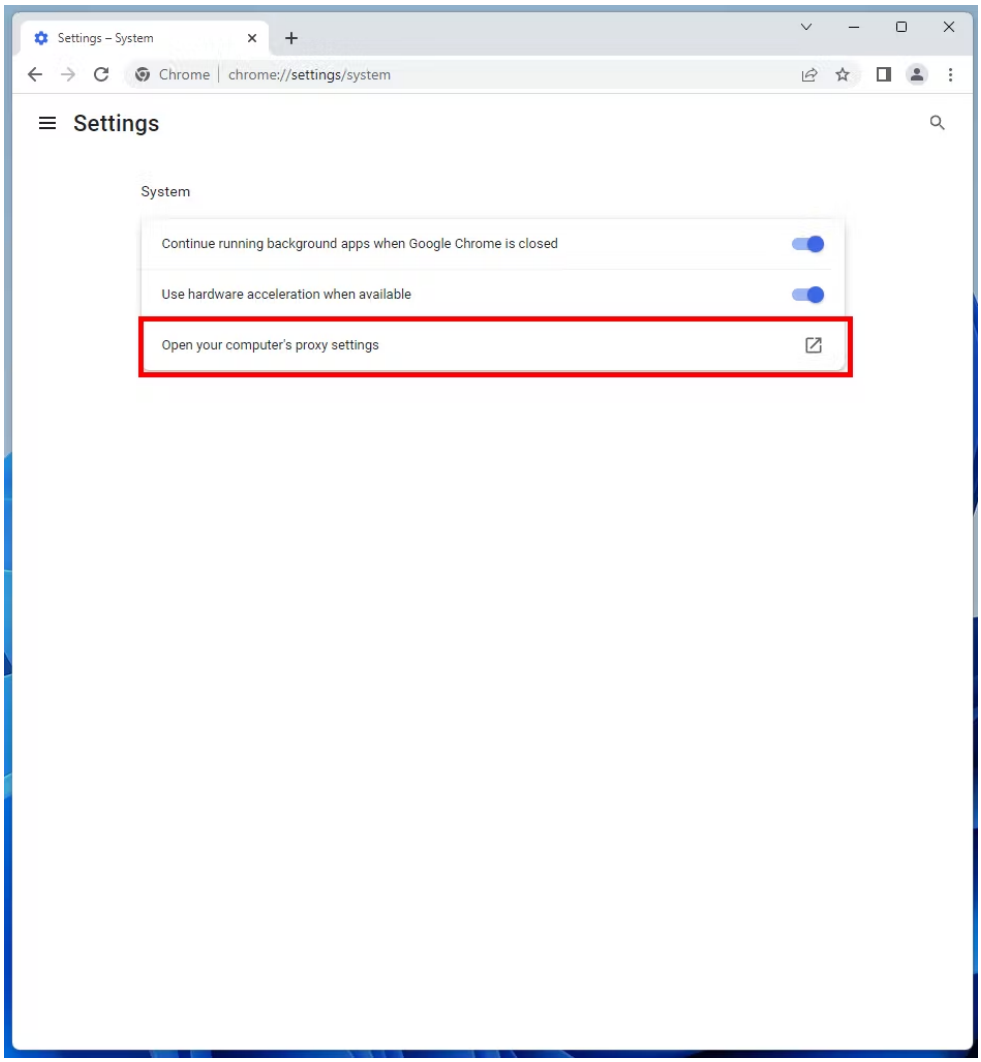
Step 4

Now open the `System` section of the settings.



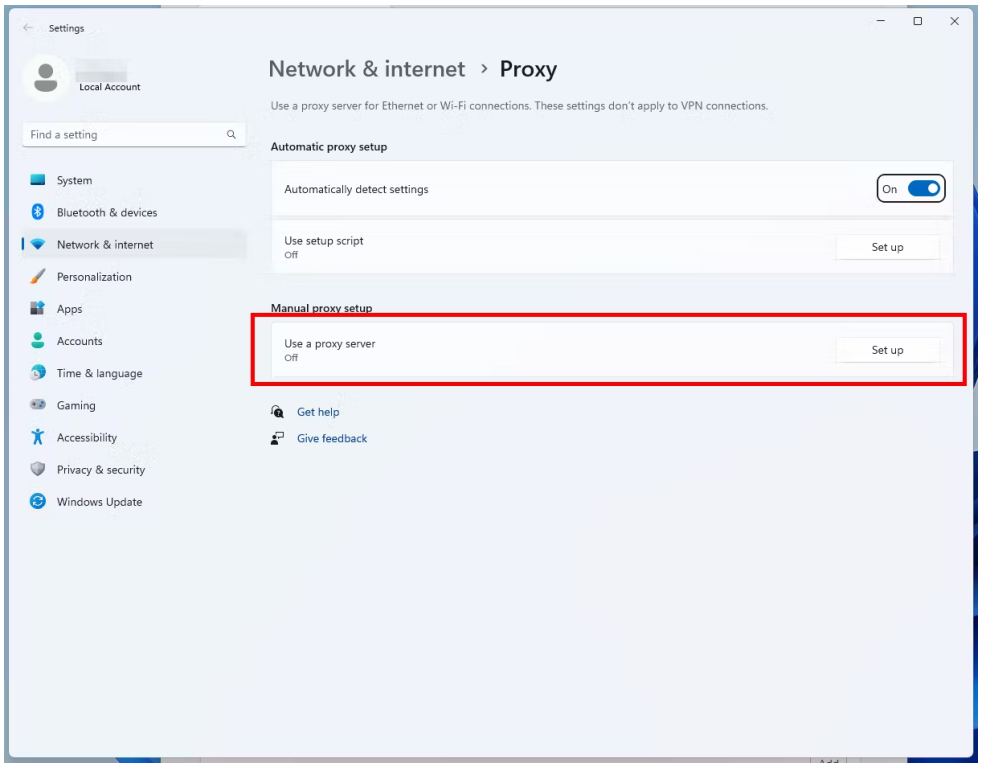
Step 5

We will need to change our computers proxy settings, click to open them.



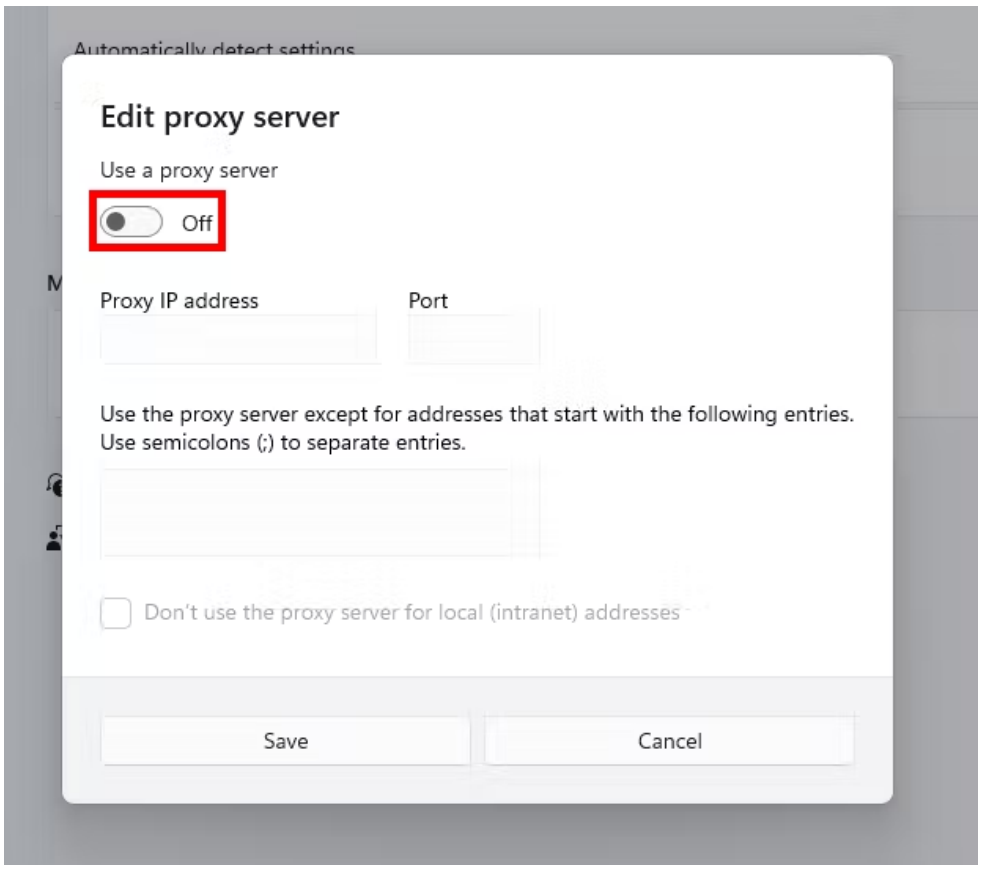
Step 6

We'll configure a manual proxy, click `Use a proxy server` to open the settings.



Step 7

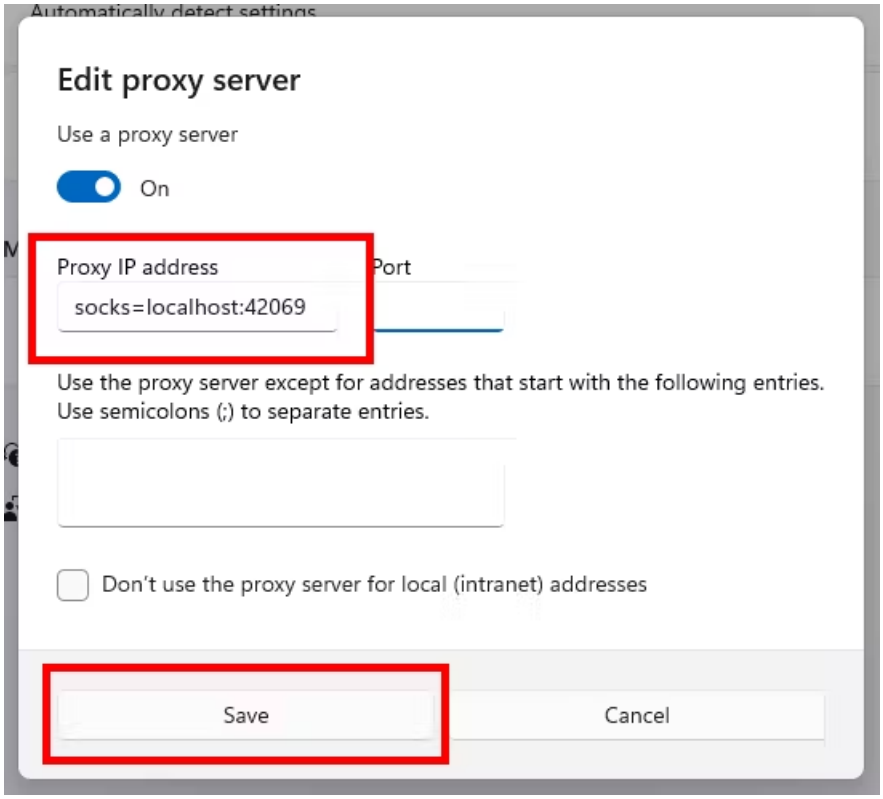
You will need to turn on the toggle to allow you to edit the settings.



Step 8

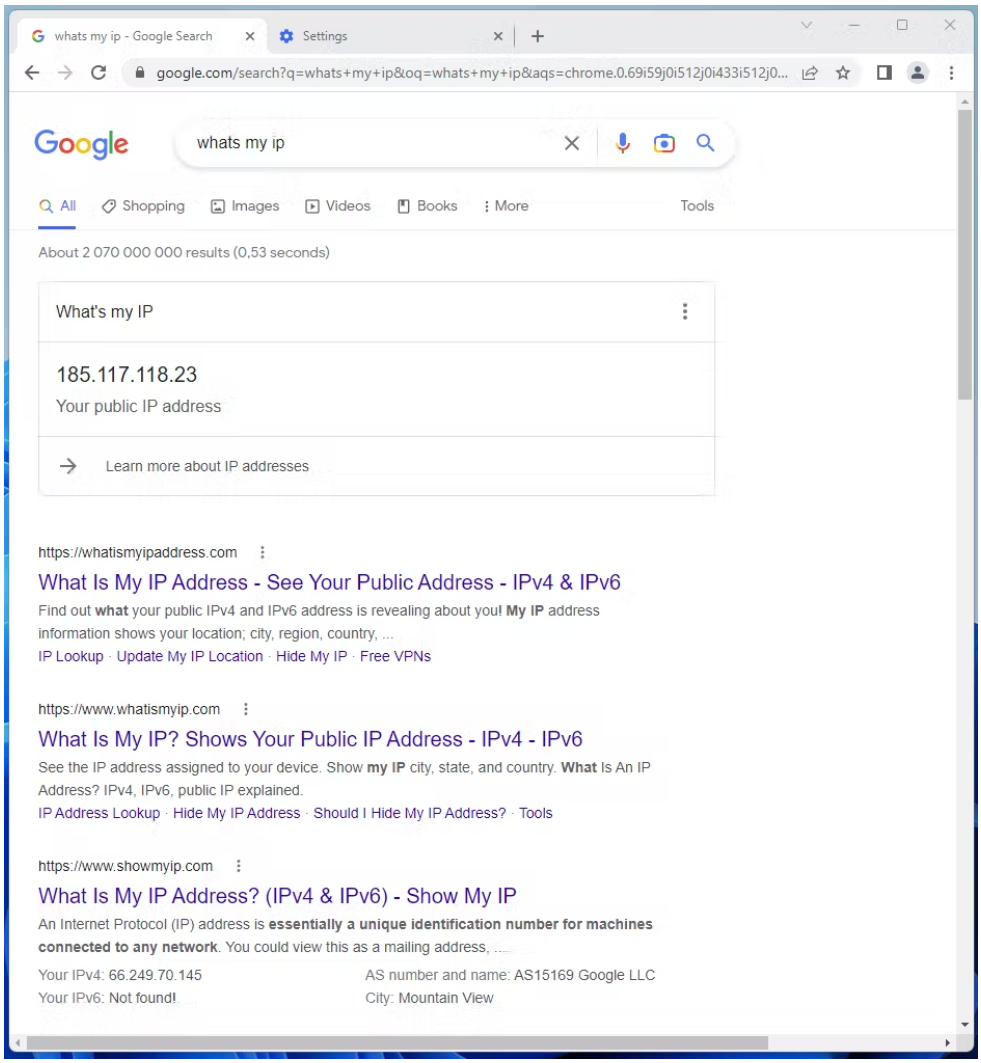
Set the proxy address to `socks=localhost:42069` and save the settings.

Or `socks=localhost:2280` if you've used PuTTY for creating the tunnel.



Step 9

Return to Chrome and ensure your IP has changed.



ssh vpn privacy Chrome
